What does this year hold?

Solar Arc Progressions

What is going to happen this year to me? Should I change my career? Will I be moving? Where should I focus my attention this year? Will there be major changes in my life? Solar Arc progressions can give you many answers to these and other questions you might be asking.

Using your favorite astrology software program, below are the steps I use working with clients, predictions, mundane charts and students.

Your first step is to set up a big wheel chart with natal on inside and solar arc progressions on outside wheel.

I would also recommend running a synastry grid to

determine the exact timing for the aspect. Set your orbs for less than one degree. Your natal planets should go across and solar arcs go down. Consider only the applying aspects for events for the coming year.

1. With a highlighter mark the aspects on the synastry grid that are **applying within a degree** of a natal planet, the Ascendant, Mid Heaven or the Degrees of the Nodes. List them on the chart in lower right hand corner.
2. Highlight the solar arc planet that is making the aspect in the outside ring
3. Highlight the Natal Planet with a **dot** showing it is being aspected for year.

4. Also highlight any planets changing signs, or at critical degrees and 29 degrees.
5. Mark last and upcoming eclipses on Solar Arc outside ring.... the ones still in effect now and ones for year.
6. Use the formula found in the box below to help with interpretations.

It may sound "simple", but it works. I've always tried to apply a step-by-step procedure rather than just jump all over the chart. See if this works for you.

Solar arcs along with the eclipses and transits mark the year and timing for changes in your life.

My solar arc _____ (planet), which rules my natal _____ (house) is making a _____ (aspect) to my natal _____ (planet), which is in my _____ (house) and rules my (house). Some keywords for this aspect are _____ . This aspect will activate my _____ (houses).
